Foot control compatible

LFH4600/4700

Use the power of your voice

with professional digital dictation

SpeechExec Basic Dictation and Transcription Software links authors and transcriptionists. It facilitates communication, the setup of individual workflow settings and organizational flexibility to help save time and resources. Transcriptionists can playback and conveniently transcribe recorder files using a foot control.

Easy dictation solution
- Workflow management and automation for enhanced productivity
- Worklist for easy work monitoring and tracking
- Optional SpeechLive connection available for even greater mobility

Powerful transcription module
- Flexible licensing to access SpeechExec from anywhere, including from home
- Automated file download for quick and convenient job routing
- Transcription player with foot control support for hands–free playback control

Highlights

Versions

Efficient workflow management

Easily monitor and manage the workflow between authors and transcriptionists. Recordings are automatically routed to the appropriate person for quicker turnaround times.

Worklists

Worklists help both authors and transcriptionists monitor their work statuses. They save time used for unnecessary status update communication. Files can be organized into sub folders, assigned specific properties and comments and marked as urgent to help organize and prioritize tasks.

Seamless integration into SpeechLive

Philips SpeechLive cloud dictation workflow solution gives users constant file access via browser for greater flexibility and mobility. With SpeechLive, authors can dictate with their smartphone from anywhere and send dictations directly to their SpeechExec software. It also features a transcription service, where trained professionals quickly type up recordings for the author.

Always accessible

Licenses are now assigned to individual users, not to individual PCs, giving you the freedom to work from your desktop at work or from a laptop off-site. Flexible licensing also allows you to easily reactivate a license in case of a hardware failure.

Automated download

SpeechExec Basic allows authors to automatically download all their dictations from their voice recorder straight into the software and route to the appropriate destination via their local network, FTP server, SpeechLive or email.

SpeechExec transcription player

The software comes with a conveniently integrated transcription player with pause, fast forward and rewind options. Together with the configurable Philips Foot Control it allows for comfortable and quick transcription.

SpeechExec Basic Dictate

The module for authors.
LFH4712: 2-year subscription

SpeechExec Basic Transcribe

The module for transcriptions including the integrated player for transcriptionists.
LFH4612: 2-year subscription
